## 1. Introduction

T2 started operations on business day 20 March 2023 following the testing of the software in 3 test stages: 1) the Euro system Acceptance Testing (EAT) performed by the Euro system as a whole, 2) the Central Bank Testing (CBT) conducted by Central Banks and 3) the User Testing (UT) executed by Central Banks and Participants.

During these test stages, some software limitations have been identified. While most of the limitations have been resolved, the remaining and the ones identified after the go-live, are being gradually lifted during the ongoing operational phase. Many fixes have been deployed with the standard T2 release R2023.JUN (10 June 2023) and some more are being planned with a possible Hot Fix release in the summer and the T2 release R2023.NOV (18 November 2023).

The objective of this document is to provide an overview of those limitations and their resolution timeline in such a way that Central Banks and Participants are aware of these, adapt their processes accordingly and avoid raising incidents against the documented limitations.

This document will present the limitations in two categories:

1. Functionalities not yet released nor delivered
2. Functionalities delivered with restrictions.

It includes an annex (Production conditions document - Annex A – PBI extract) which provides further descriptions on open defects including the Business Oriented Descriptions (BOD).

Both this T2 Production document and its annex will be revised on a weekly basis to provide users with the latest updates on the software evolution.

## 2. Functionalities not yet released nor delivered

This category covers the functionalities not yet released to PROD classified by service component (i.e. CLM, RTGS, DWH, etc.)

### 2.1 DWH

All the DWH predefined reports relevant for participants have been released in the production environment. However, the following reports which were initially foreseen to be delivered in the production environment with T2 R2023.JUN (but postponed to later date to be confirmed), are visible but are not ready to be used.

Short Name	Long name of the DWH report	Report type
ANS01	ANS 01 - Overview of AS transfer orders	Predefined DWH reports (ancillary system)
TRN06	TRN 06 - Monthly share of Indirect Participant, addressable BIC and multi-addressee payments as part of total Direct Participant's activity	Predefined DWH reports (transactions)
TRN08	TRN 08 - Business activity of a party/parties	Predefined DWH reports (transactions)

The historical TARGET2 data will not be accessible from the Data Warehouse before end of June 2023. The historical TARGET2 data from CRSS until 31 December 2022 can be requested via a service request to the T2 Service Desk.

### 2.2 BILL

The activation of the T2 billing process is still to be confirmed as related testing activities are still ongoing. Therefore, the problems impacting BILL component listed in the annex A should not be considered.

### 3. Functionalities delivered with restrictions

This category includes the participants functionalities delivered to PROD but impacted by open defects.

The section is divided in sub-sections which relate to specific components (e.g. CRDM, CLM, etc). Each component sub-section is introduced by an overview followed by a list of open defects. For each open defect, the list includes the PBI number i.e. problem reference, the description of the problem and target delivery date of the fix in the production environment. The target delivery date "To be confirmed" refers to any of the following cases: 1) a fix to the problem has already been delivered but still needs to be confirmed as successfully retested by the users or 2) an unsuccessful retesting or the problem is still under analysis.

#### 3.1 CRDM

##### 3.1.1 Overview

CRDM functionalities are released with restrictions. This component is still impacted by open defects presented in the following section.

**Note:** the participants are requested to follow the recommendations described in the document "[CLM/RTGS Reference Data / recommendations for setting up data in CRDM](#)" to avoid data inconsistencies that might hamper the business day processing. This document will be shared by the relevant National Service Desk (NSD).
