

12 January 2011

PRESS RELEASE

EURO AREA SECURITIES ISSUES STATISTICS: NOVEMBER 2010

The annual growth rate of the outstanding amount of debt securities issued by euro area residents increased from 3.2% in October 2010 to 4.3% in November. For the outstanding amount of quoted shares issued by euro area residents, the annual growth rate was 1.7% in November 2010, compared with 1.8% in October.

New issuance of debt securities by euro area residents totalled EUR 1,068 billion in November 2010 (see Table 1 and Chart 1). Redemptions stood at EUR 844 billion and net issues amounted to EUR 235 billion (see Table 1).¹ The annual growth rate of outstanding debt securities issued by euro area residents increased from 3.2% in October 2010 to 4.3% in November (see Table 1 and Chart 3).

As regards the sectoral breakdown, the annual growth rate of outstanding debt securities issued by non-financial corporations was 8.3% in November 2010, compared with 8.5% in October (see Table 2 and Chart 4). For the monetary financial institutions (MFIs) sector, this growth rate was 0.1% in November 2010, the same as in October. The annual growth rate of outstanding debt securities issued by financial corporations other than MFIs increased from 0.4% in October 2010 to 2.5% in November. For the general government, this growth rate increased from 6.8% in October 2010 to 8.4% in November.

As regards the maturity breakdown, the annual rate of change of outstanding short-term debt securities was -0.1% in November 2010, compared with -3.9% in October (see Table 1 and Chart 3). The annual growth rate of outstanding short-term debt securities issued by MFIs increased from 0.6% in October 2010 to 4.1% in November (see Table 2). For long-term debt securities, the annual growth rate increased from 4.1% in October 2010 to 4.8% in November (see Table 1). The annual rate of change of outstanding long-term debt

¹ As a full breakdown of net issues into gross issues and redemptions may not always be available, the difference between aggregated gross issues and redemptions may deviate from the aggregated net issues.

securities issued by MFIs decreased from 0.0% in October 2010 to -0.5% in November (see Table 2). The annual growth rate of outstanding fixed rate long-term debt securities was 7.1% in November 2010, compared with 6.9% in October (see Table 1). The annual rate of change of outstanding variable rate long-term debt securities increased from -0.5% in October 2010 to 1.0% in November.

Concerning the currency breakdown, the annual growth rate of outstanding euro-denominated debt securities increased from 3.2% in October 2010 to 4.3% in November. For debt securities in other currencies, this growth rate increased from 2.8% in October 2010 to 4.1% in November (see Table 1).

The seasonally adjusted three-month annualised growth rate of outstanding debt securities issued by euro area residents increased from 5.6% in October 2010 to 7.4% in November (see Table 3 and Chart 5).

New issuance of quoted shares by euro area residents totalled EUR 8.2 billion in November 2010 (see Table 4). As redemptions came to EUR 1.0 billion, net issues amounted to EUR 7.3 billion. The annual growth rate of the outstanding amount of quoted shares issued by euro area residents (excluding valuation changes) was 1.7% in November 2010, compared with 1.8% in October (see Table 4 and Chart 6). The annual growth rate of quoted shares issued by non-financial corporations was 0.8% in November 2010, the same as in October. For monetary financial institutions, the corresponding growth rate decreased from 7.3% in October 2010 to 6.8% in November. For financial corporations other than MFIs, this growth rate was 3.8% in November 2010, compared with 4.0% in October.

The outstanding amount of quoted shares issued by euro area residents totalled EUR 4,408 billion at the end of November 2010. Compared with EUR 4,078 billion at the end of November 2009, this represents an annual increase of 8.1% in the value of the stock of quoted shares in November 2010, down from 11.5% in October.

Unless otherwise indicated, data relate to non-seasonally adjusted statistics. In addition to the developments for November 2010, this press release incorporates minor revisions to the data for previous periods. As of the reference periods December 2008 and December 2009, respectively, two euro area countries extended the coverage of debt securities issued to include also the non-MFI corporations and the short-term debt securities issued by the general government sector; the coverage of quoted shares has also been expanded to include also international listings. As the annual growth rates are based on financial transactions that occur when an institutional unit incurs or redeems liabilities, they are not affected by the impact of any other changes which do not arise from transactions.

Source: ECB securities issues statistics.

1) "Short-term" means securities with an original maturity of one year or less (in exceptional cases two years or less). Securities with a longer original maturity, or with optional maturity dates, the latest of which is more than one year away, or with indefinite maturity dates, are classified as long-term.

2) The residual difference between total long-term debt securities and fixed and variable rate long-term debt securities consists of zero coupon bonds and revaluation effects.

3) As a full breakdown of net issues into gross issues and redemptions may not always be available, the difference between aggregated gross issues and redemptions may deviate from the aggregated net issues.

4) Monthly averages of the transactions during this period.

5) As of the reference period December 2009 a euro area country extended the coverage of debt securities issued to include also the non-MFI corporations as well as the short-term debt securities issued by the Government sector. This leads to higher levels of outstanding amounts of around EUR 800 billion, mainly for the long-term (variable rate) debt securities.

6) Annual growth rates are based on financial transactions that occur when an institutional unit incurs or redeems liabilities. The annual growth rates therefore exclude the impact of reclassifications, revaluations, exchange rate variations and any other changes which do not arise from transactions.

1) Corresponding ESA 95 sector codes: MFIs (including Eurosystem) comprises the ECB and the national central banks of the euro area (S.121) and other monetary financial institutions (S.122); financial corporations other than MFIs comprises other financial intermediaries (S.123), financial auxiliaries (S.124) and insurance corporations and pension funds (S.125); non-financial corporations (S.11); central government (S.1311); other general government comprises state government (S.1312), local government (S.1313) and social security funds (S.1314).

2) The residual difference between total long-term debt securities and fixed and variable rate long-term debt securities consists of zero coupon bonds and revaluation effects.

3) As a full breakdown of net issues into gross issues and redemptions may not always be available, the difference between aggregated gross issues and redemptions may deviate from the aggregated net issues.

4) Monthly averages of the transactions during this period.

5) As of the reference period December 2009 a euro area country extended the coverage of debt securities issued to include also the non-MFI corporations as well as the short-term debt securities issued by the Government sector. This leads to higher levels of outstanding amounts of around EUR 800 billion, mainly for the financial corporations other than MFIs sector.

6) Annual growth rates are based on financial transactions that occur when an institutional unit incurs or redeems liabilities. The annual growth rates therefore exclude the impact of reclassifications, revaluations, exchange rate variations and any other changes which do not arise from transactions.

1) Corresponding ESA 95 sector codes: MFIs (including Eurosystem) comprises the ECB and the national central banks of the euro area (S.121) and other monetary financial institutions (S.122); financial corporations other than MFIs comprises other financial intermediaries (S.123), financial auxiliaries (S.124) and insurance corporations and pension funds (S.125); non-financial corporations (S.11); central government (S.1311); other general government comprises state government (S.1312), local government (S.1313) and social security funds (S.1314).

2) As of the reference period December 2009 a euro area country extended the coverage of debt securities issued to include also the non-MFI corporations as well as the short-term debt securities issued by the Government sector. This leads to higher levels of outstanding amounts (not seasonally adjusted) of around EUR 800 billion, mainly for the financial corporations other than MFIs sector.

3) Three-month annualised growth rates are based on financial transactions that occur when an institutional unit incurs or redeems liabilities. The three-month annualised growth rates therefore exclude the impact of reclassifications, revaluations, exchange rate variations and any other changes which do not arise from transactions. The rates are annualised to allow direct comparisons with annual rates (please note that the non-adjusted rates presented in Table 2 are almost identical to seasonally adjusted annual rates).

1) Corresponding ESA 95 sector codes: MFIs refers to other monetary financial institutions (S.122); financial corporations other than MFIs comprises other financial intermediaries (S.123), financial auxiliaries (S.124) and insurance corporations and pension funds (S.125); non-financial corporations (S.11).

2) Monthly averages of the transactions during this period.

3) As of the reference period December 2009 a euro area country extended the coverage of quoted shares, including also international listings.

This leads to higher levels of outstanding amounts of around EUR 120 billion, mainly in the non-financial corporations sector.

4) Percentage change between the amount outstanding at the end of the month and the amount outstanding 12 months earlier.

5) Annual growth rates are based on transactions that occur during the period and therefore exclude reclassifications and any other changes which do not arise from transactions.
