#### 11 October 2016

# Euro area households and non-financial corporations: 2nd quarter 2016

- Loans to households increased in the second quarter of 2016 at a higher rate of 1.7% (after 1.5% in the first quarter). Household financial investment accelerated as well (2.3% after 2.0%). Household net worth increased at a higher rate (3.2% after 2.2%).
- Non-financial corporations' net entrepreneurial income (broadly equivalent to current profits) increased after decreasing previously (4.7% after -5.0%) as net operating surplus and net property income increased. Their financing increased at a broadly unchanged rate of 2.1%.

#### Households

Household gross disposable income increased at a broadly unchanged annual rate of 2.6% in the second quarter of 2016. Gross operating surplus and mixed income from the self-employed increased at a higher rate (second quarter 2016: 3.5%, first quarter: 2.5%), while the compensation of employees grew at a

lower rate (2.7% after 3.0%). Household consumption expenditure increased at a broadly unchanged rate of 2.2%.

The household gross saving rate in the second quarter of 2016 was 12.5%, unchanged from a year ago. Household gross non-financial investment (which refers mainly to housing) grew at a higher rate compared with the previous quarter (6.1% after 3.1%). Loans to households, the main component of household financing increased at a higher rate (1.7% after 1.5%).

Household financial investment grew at a higher rate (2.3% after 2.0%). Among the components, currency and deposits grew at a higher rate (3.3% after 3.0%). Life insurance and pension schemes accelerated (3.1% after 2.8%), while shares and other equity decelerated (2.0% after 2.3%). While the decline of debt securities decelerated (-10.8% after -11.9%), redemptions and sales continued to exceed purchases.

Household net worth increased at a higher rate (3.2% after 2.2%), as accelerated financial and non-financial investments and net valuation gains on financial and non-financial assets were only partly offset by the accelerated incurrence of liabilities. The value of housing wealth increased at a higher rate (4.0% after 3.7%). The household debt-to-income ratio decreased to 93.6% in the second quarter of 2016 from 94.3% in the second quarter of 2015, as disposable income grew faster than loans to households. Table A summarises the main results for households, expressed as a percentage of adjusted disposable income (For details, see also Table 1 in the Annex).

#### PRESS RELEASE / 11 October 2016

Euro area households and non-financial corporations: 2nd quarter 2016

#### **Notes:**

- The annual growth rate of non-financial transactions and of outstanding assets and liabilities (stocks) is calculated as the percentage change between the value for a given quarter and that value recorded four quarters earlier. The annual growth rates used for financial transactions refer to the total value of transactions during the year in relation to the outstanding stock a year before.
- Net entrepreneurial income is broadly equivalent to current profits in business accounting (after the receipt and payment of interest and including the profits of foreign subsidiaries, but before the payment of income taxes and dividends).
- The sum of household debt and non-financial corporation debt (also referred to as "private debt"), as a percentage of GDP is one of the headline indicators of the macroeconomic imbalances procedure (MIP). For non-financial corporations the definition of debt used by the MIP differs from the definition applied here as the MIP indicator is based on annual, consolidated data, moreover, pension fund reserve liabilities and trade credits are excluded. For the MIP data see: <a href="Manualstoneous.">Annualstoneous.</a>
- Further methodological information is available at: Euro area accounts.
