Reproduction is permitted provided that the source is acknowledged.

The composite cost-of-borrowing indicator, which combines interest rates on all loans to corporations, showed no change in December 2019. The interest rate on new loans of over €1 million with a floating rate and an initial rate fixation period of up to three months increased by 12 basis points to 1.26%. This increase was due to developments in several euro area countries and it was mainly driven by the interest rate effect. The rate for new loans of the same size with an initial rate fixation period of over ten years increased by 10 basis points to 1.39%. This month-on-month change was due to developments in two euro area countries and it was driven by both interest rate and weight effects. In the case of new loans of up to €250,000 with a floating rate and an initial rate fixation period of up to three months, the average rate charged remained broadly unchanged at 2.00%.

As regards new deposit agreements, the interest rate on deposits from corporations with an agreed maturity of up to one year rose by 4 basis points to -0.01% in December 2019, driven by the interest rate effect. The interest rate on overnight deposits from corporations stayed more or less constant at 0.01%.

The interest rate on new loans to sole proprietors and unincorporated partnerships with a floating rate and an initial rate fixation period of up to one year decreased by 16 basis points to 2.18%. This decrease was due to developments in two euro area countries and it was mainly driven by the interest rate effect.

#### Data for bank interest rates for corporations

## Bank interest rates for households

### Chart 2

Bank interest rates on new loans to, and deposits with agreed maturity from, euro area households

(percentages per annum)

### [Data for cost of borrowing and deposit interest rate for households](#)

The composite cost-of-borrowing indicator, which combines interest rates on all loans to households for house purchase, decreased in December 2019. While the interest rate on loans for house purchase with a floating rate and an initial rate fixation period of up to one year remained broadly unchanged at 1.46%, the interest rate on housing loans with an initial rate fixation period of over ten years fell by 9 basis points to 1.39%, mainly driven by the interest rate effect. In the same period, the interest rate on new loans to households for consumption fell by 21 basis points to 5.30%. This decrease was due to developments in two euro area countries and it was mainly driven by weight effect.

As regards new deposit from households, the interest rate on deposits with an agreed maturity of up to one year remained broadly unchanged at 0.21% in December 2019. The interest rate on deposits redeemable at three months' notice and on overnight deposits showed no change, at 0.42% and 0.03%, respectively.

Sonnemannstrasse 20, 60314 Frankfurt am Main, Germany  
Tel.: +49 69 1344 7455, e-mail: [media@ecb.europa.eu](mailto:media@ecb.europa.eu), website: [www.ecb.europa.eu](http://www.ecb.europa.eu)

## Notes:

- The composite cost-of-borrowing indicators are described in the article entitled "Assessing the retail bank interest rate pass-through in the euro area at times of financial fragmentation" in the August 2013 issue of the ECB's Monthly Bulletin (see Box 1). For these indicators, a weighting scheme based on the 24-month moving averages of new business volumes has been applied, in order to filter out excessive monthly volatility. The tables in this press release present a subset of the series used in the calculation of the cost of borrowing indicators and hence cannot explain all developments in these composite indicators.
- Interest rates on new business are weighted by the size of the individual agreements. This is done both by the reporting agents and when the national and euro area averages are computed. Thus changes in average euro area interest rates for new business reflect, in addition to changes in interest rates, changes in the weights of individual countries' new business for the instrument categories concerned. The "interest rate effect" and the "weight effect" presented in this press release are derived from the Bennet index, which allows month-on-month developments in euro area aggregate rates resulting from changes in individual country rates (the "interest rate effect") to be disentangled from those caused by changes in the weights of individual countries' contributions (the "weight effect"). Owing to rounding, the combined "interest rate effect" and the "weight effect" may not add up to the month-on-month developments in euro area aggregate rates.
- In addition to monthly euro area bank interest rate statistics for December 2019, this press release incorporates revisions to data for previous periods. Hyperlinks in the main body of the press release lead to data that may change with subsequent releases as a result of revisions. Unless otherwise indicated, these euro area statistics cover the EU Member States that had adopted the euro at the time to which the data relate.
- As of reference period December 2014, the sector classification applied to bank interest rates statistics is based on the European System of Accounts 2010 (ESA 2010). In accordance with the ESA 2010 classification and as opposed to ESA 95, the non-financial corporations sector (S.11) now excludes holding companies not engaged in management and similar captive financial institutions.
