corporations increased to €323 billion (3.4% of net disposable income) from €256 billion while that of financial corporations increased to €124 billion (1.3% of net disposable income) from €117 billion. Net lending by households decreased to €728 billion (7.7% of net disposable income) from €874 billion. Households

The annual growth rate of household <u>financial investment</u> decreased to 4.1% in the second quarter of 2021, from 4.6% in the previous quarter. This deceleration was mainly due to currency and deposits growing at a lower rate of 6.7% (after 8.1%), and net sales of debt securities increasing more strongly (-10.0% after -7.6%) (see Table 1 below).

Households were net buyers of listed shares. By issuing sector, they were net buyers of listed shares of non-financial corporations, other financial institutions, insurance corporations and the rest of the world (i.e. shares issued by non-residents), while shares of MFIs were sold on a net basis. Households continued to sell debt securities (in net terms) issued by MFIs, other financial institutions, government and the rest of the world (see Table 2.2. in the Annex).

financing by debt securities and loans and an acceleration in financing by shares and other equity as well as trade credits (see Table 2 below). Loan financing decelerated as a result of a lower growth of loans from MFIs, other financial corporations and government, while intercompany loans increased at a higher rate and loans from the rest of the world declined at a lower rate (see Table 3.2 in the Annex).

Non-financial corporations' <u>debt-to-GDP ratio</u> (consolidated measure) decreased to 80.5% in the second quarter of 2021, from 81.1% in the second quarter of 2020; conversely, the <u>non-consolidated</u>, wider debt measure increased to 143.7% from 141.8%, as the non-consolidated debt grew faster than GDP, mainly due to the growth of trade credits and loans between non-financial corporations (see Chart 2).

Notes

These data come from a second release of quarterly euro area sector accounts from the European Central Bank (ECB) and Eurostat, the statistical office of the European Union. These data come from a second release of quarterly euro area sector accounts from the European Central Bank (ECB) and Eurostat, the statistical office of the European Union. This release incorporates annual revisions as from the first quarter of 1999 and completed data for all sectors compared with the first quarterly release on "Euro area households and non-financial corporations" of 4 October 2021.

The debt-to-GDP (or debt-to-income) ratios are calculated as the outstanding amount of debt in the reference quarter divided by the sum of GDP (or income) in the four quarters to the reference quarter. The ratio of non-financial transactions (e.g. savings) as a percentage of income or GDP is calculated as sum of the four quarters to the reference quarter for both numerator and denominator.

Euro area economic and financial developments by institutional sector: second quarter of 2021

The annual growth rate of non-financial transactions and of outstanding assets and liabilities (stocks) is calculated as the percentage change between the value for a given quarter and that value recorded four quarters earlier. The annual growth rates used for financial transactions refer to the total value of transactions during the year in relation to the outstanding stock a year before.

The next release of the <u>Household Sector Report</u> containing results for the euro area and all EU countries is scheduled for 10 November 2021.

Hyperlinks in the main body of the statistical release lead to data that may change with subsequent releases as a result of revisions. Figures shown in annex tables are a snapshot of the data as at the time of the current release.

The production of quarterly financial accounts (QFA) may have been affected by the COVID-19 crisis. More information on the potential impact on QFA can be found here.
