The composite cost-of-borrowing indicator, which combines interest rates on all loans to corporations, increased, driven by the interest rate effect in January 2022. The interest rate on new loans of over €1 million with a floating rate and an initial rate fixation period of up to three months remained broadly unchanged at 1.13%. The rate on new loans of the same size with an initial rate fixation period of over three months and up to one year rose by 27 basis points to 1.24%. This increase was due to developments in three euro area countries and was mainly driven by the interest rate effect. The interest rate on new loans of over €1 million with an initial rate fixation period of over ten years increased by 20 basis points to 1.39%. This increase was due to developments in three euro area countries and was mainly driven by the interest rate effect. In the case of new loans of up to €250,000 with a floating rate and an initial rate fixation period of up to three months, the average rate charged rose by 7 basis points to 1.91%, driven by the interest rate effect.

As regards new deposit agreements, the interest rate on deposits from corporations with an agreed maturity of up to one year stayed almost constant at -0.32% in January 2022. The interest rate on overnight deposits from corporations stayed almost constant at -0.04%.

The interest rate on new loans to sole proprietors and unincorporated partnerships with a floating rate and an initial rate fixation period of up to one year increased by 10 basis points to 1.98%. This increase was due to developments in two euro area countries and was driven by the interest rate effect.

Table 1
Bank interest rates for corporations

	Bank interest rates				New business volumes (EUR billions)		
	Jan. 2022	Month-on-month change (basis points)			Jan. 2022	Dec. 2021	Jan. 2021
		Interest rate effect	Weight effect				
Corporations							
<i>Composite cost-of-borrowing indicator</i>	1.43%	+7	+8	0	264.15	264.19	275.05
<i>Loans of over €1M with a floating rate and i.r.f. of up to 3 months</i>	1.13%	-1	+1	-2	97.86	149.59	83.66
<i>Loans of over €1M with an i.r.f. of over 3 months and up to 1 year</i>	1.24%	+27	+26	+1	23.13	51.24	22.61
<i>Loans of over €1M with an i.r.f. of over 10 years</i>	1.39%	+20	+18	+3	7.09	17.59	6.74
<i>Loans of up to €0.25M with a floating rate and i.r.f. of up to 3 months</i>	1.91%	+7	+10	-3	18.12	21.60	16.80
<i>Composite interest rate for new deposits with agreed maturity</i>	-0.30%	+1	+1	0	77.49	94.43	78.39
<i>Deposits with an agreed maturity of up to one year</i>	-0.32%	+2	+1	+1	73.70	88.81	73.87
<i>Overnight deposits*</i>	-0.04%	-1	0	0	2,594.92	2,688.76	2,381.85
Sole proprietors and unincorporated partnerships							
<i>Loans with a floating rate and i.r.f. of up to one year</i>	1.98%	+10	+14	-4	2.79	3.68	2.81

i.r.f. = initial rate fixation

* For this instrument category, the concept of new business is extended to the whole outstanding amounts and therefore the business volumes are not comparable with those of the other categories. Outstanding amounts data are derived from the ECB's monetary financial institutions balance sheet statistics.

Bank interest rates for households

Chart 2

Bank interest rates on new loans to, and deposits from, euro area households

(percentages per annum)

[Data for cost of borrowing and deposit interest rate for households \(Chart 2\)](#)

The composite cost-of-borrowing indicator, which combines interest rates on all loans to households for house purchase, remained broadly unchanged in January 2022. The interest rate on loans for house purchase with a floating rate and an initial rate fixation period of up to one year remained broadly unchanged at 1.35%. The rate on housing loans with an initial rate fixation period of over one and up to five years stayed constant at 1.46%. The interest rate on loans for house purchase with an initial rate fixation period of over five and up to ten years and the one on housing loans with an initial rate fixation period of over ten years remained broadly unchanged at 1.31% and 1.32%, respectively. In the same period the interest rate on new loans to households for consumption rose by 24 basis points to 5.30%. This increase was due to developments in three euro area countries and was mainly driven by the interest rate effect.

As regards new deposits from households, the interest rate on deposits with an agreed maturity of up to one year remained broadly unchanged at 0.19%. The rate on deposits redeemable at three months' notice and the one on overnight deposits from households stayed constant at 0.35% and 0.01%, respectively.

Notes:

- In this press release "corporations" refers to non-financial corporations (sector S.11 in the European System of Accounts 2010, or ESA 2010), "households" refers to households and non-profit institutions serving households (ESA 2010 sectors S.14 and S.15) and "banks" refers to monetary financial institutions except central banks and money market funds (ESA 2010 sectors S.122).
- The composite cost-of-borrowing indicators are described in the article entitled "Assessing the retail bank interest rate pass-through in the euro area at times of financial fragmentation" in the August 2013 issue of the ECB's Monthly Bulletin (see Box 1). For these indicators, a weighting scheme based on the 24-month moving averages of new business volumes has been applied, in order to filter out excessive monthly volatility. For this reason the developments in the composite cost of borrowing indicators in both tables cannot be explained by the month-on-month changes in the displayed subcomponents. Furthermore, the table on bank interest rates for corporations presents a subset of the series used in the calculation of the cost of borrowing indicator.
- Interest rates on new business are weighted by the size of the individual agreements. This is done both by the reporting agents and when the national and euro area averages are computed. Thus changes in average euro area interest rates for new business reflect, in addition to changes in interest rates, changes in the weights of individual countries' new business for the instrument categories concerned. The "interest rate effect" and the "weight effect" presented in this press release are derived from the Bennet index, which allows month-on-month developments in euro area aggregate rates resulting from changes in individual country rates (the "interest rate effect") to be disentangled from those caused by changes in the weights of individual countries' contributions (the "weight effect"). Owing to rounding, the combined "interest rate effect" and the "weight effect" may not add up to the month-on-month developments in euro area aggregate rates.
- In addition to monthly euro area bank interest rate statistics for January 2022, this press release incorporates revisions to data for previous periods. Hyperlinks in the main body of the press release lead to data that may change with subsequent releases as a result of revisions. Unless otherwise indicated, these euro area statistics cover the EU Member States that had adopted the euro at the time to which the data relate.
- As of reference period December 2014, the sector classification applied to bank interest rates statistics is based on the European System of Accounts 2010 (ESA 2010). In accordance with the ESA 2010 classification and as opposed to ESA 95, the non-financial corporations sector (S.11) now excludes holding companies not engaged in management and similar captive financial institutions.
- References to the number of countries driving the euro area developments described are based on changes in interest rates in each country in combination with the weight of the respective country in the total volume of transactions.
