

25-29 October

Aim and content

The aim of the course is to help enable participants to address the new challenges in financial stability analysis and monitoring, adopting an essentially analytical approach. This edition of the course will pay particular attention to the measures adopted internationally to tackle the crisis stemming from COVID-19, without forgetting structural matters pertaining to financial stability, namely: the international regulatory framework; the various analytical frameworks and tools used by supervisors; and the implementation of macroprudential policy.

Professional profile of attendees

It is aimed at professionals from central banks and banking regulators that are CEMLA or ASBA members, with experience in macroprudential supervision and in the monitoring and analysis of financial stability.

Organisation and format

Given the current situation resulting from the global spread of COVID-19, both our internal guidelines and government recommendations advise that no international meetings be held unless it is absolutely essential. In consequence, we cannot hold face-to-face meetings at present and, as an extraordinary measure, the course will be delivered on-line this year.

The course is organised jointly by CEMLA and the Banco de España, and is intended to feature among the permanent annual array of training courses offered by both institutions.

The course will be held in morning or afternoon sessions, owing to the time difference. It will bring together experts and managers from the Banco de España's Directorate General Financial Stability, Regulation and Resolution, with a distinguished group of experts from CEMLA and from other international agencies.

Participation is by invitation only.
