NOTES TO THE TABLES OF CHAPTER 1

Table 1.1. Activity, prices and labour market
Sources: Eurostat and ECB (Monthly Bulletin, "Euro area statistics").
a. Components exclude changes in inventories. Based mainly on the ESA 95.
b. Exports and imports cover goods and services and include internal cross-border trade in the euro area.
c. Employment data are based on the ESA 95. Due to sample differences, the sum of quarterly data does not coincide with the annual data. Unemployment data follow the recommendations of ILO.
d.ECU billion to end-1998.

Table 1.2. Saving, investment and financing
Source: ECB, Monthly Bulletin, "Euro area statistics".
a. Non-consolidated data.
b. Including net acquisition of valuables and non produced assets.

Table 1.5. Prices
Source: Eurostat.
a. The year 2001 has been revised as a result of the inclusion of sales prices in the Spanish and Italian indices and of a new basket of goods and services in the Spanish index. Incorporating since January 2011 the rules of Commission Regulation (EC) Nº330/2009 on the treatment of seasonal products.
b. Including alcoholic beverages and tobacco.
c. Refers to the index for the period 2006.

Table 1.6. General government deficit
Sources: Eurostat and ECB (Monthly Bulletin, "Euro area statistics").
a. The data correspond to ESA 95.
b. Data for Estonia are not included.
c. Difference between the annual change in nominal gross consolidated debt and the deficit as a percentage of GDP.

Table 1.7. General government nominal gross consolidated debt
Sources: Eurostat and ECB (Monthly Bulletin, "Euro area statistics").
a. The data correspond to ESA 95.
b. Data for Estonia are not included.

Table 1.8. Aggregated and consolidated balance sheet and transactions (adjusted flows) of the euro area MFIs, including the Eurosystem
Sources: ECB and in-house calculations.
a. Also includes the counterpart of Central Government monetary transactions.

Table 1.9. Euro area monetary aggregates and counterparts of M3. Summary
Sources: ECB and in-house calculations.

Table 1.10. Euro area monetary aggregates and counterparts of M3. Consolidated balances. Original series
Source: ECB.
a. Data refer to the changing composition of the euro area.
b. Incorporates the adjustments made to certain instruments (shares in money market funds, money market instruments and securities other than shares issued with a maturity of up to two years), issued by MFIs resident in the euro area, in order to deduct that part of such issues which should not be included in M3 as it is held by non-residents. These adjustments, which it was not possible to make until 2001 owing to the limitations of the statistical sources, have been introduced in two stages and have entailed modification of the time series from January 1999, inclusive, onwards. In the first stage (May 2001), that part of the series corresponding to shares in money market funds was revised and in the second stage (October 2001), the part corresponding to all other instruments. For further details see Box 1 in the November 2001 issue of the ECB Monthly Bulletin.
For data as from the reference period June 2010, and henceforth, repo operations conducted through central counterparties (CCPs) are excluded from the M3 component “repurchase agreements”, and reverse repo operations conducted through CCPs are excluded from the M3 counterpart position “loans to other euro area residents”. These items are instead now included in the residual category “Net remaining”.c. Includes loans and securities.

Table 1.11. Euro area monetary aggregates and counterparts of M3.Transactions (adjusted flows). Original series
Source: ECB.
a. Data refer to the changing composition of the euro area.
b. See note (b) to the table 1.10.

c. Includes loans and securities.

Table 1.12. Euro area monetary aggregates and counterparts of M3. Consolidated balance-sheet and transactions (adjusted flows). Seasonally adjusted series
Source: ECB.
a. Data refer to the changing composition of the euro area.
b. For the details of the method used to calculate the seasonally adjusted series, see the ECB publication "Seasonal adjustment of monetary aggregates and HICP for the euro area", August 2000.
c. See note (b) to the table 1.10.

Table 1.13. Contribution of the MFIs resident in Spain to the euro area monetary aggregates and counterparts of M3
Source: BE.
a. Data refer to the changing composition of the euro area.
b. This table is a requirement of the IMF in connection with the Special Data Dissemination Standard (SDDS).
c. See note (b) to the table 1.10.
d. Includes loans and securities.
e. These aggregates exclude cash held by the public, which is included under the counterparts. Since January 2002, cash held by the public has been calculated by applying to the euro banknotes in circulation the percentage assigned by the Banco de España in accordance with Eurosystem accounting arrangements (see the footnote to the summary balance sheet at the end of this bulletin), plus coins in euro and banknotes and coins in pesetas not converted into euro, minus MFIs' holdings of cash. Since January 2003, banknotes and coins in pesetas not converted into euro have been excluded.

Table 1.14. Euro area monetary aggregates and the contribution of MFIs resident in Spain to the aggregates
Sources: ECB and BE.
a. Data refer to the changing composition of the euro area.
b. Rates computed using transactions (adjusted flows).
c. The contribution of MFIs resident in Spain refers to the original unadjusted series.
d. Includes loans and securities.
e. Rates calculated on the basis of contributions which exclude cash (see note (e) to Table 1.13).

Table 1.15. Interest rates
Source: ECB, Monthly Bulletin, "Euro area statistics", tables 1.2, 1.3, 4.5, 4.6 and 4.7.
a. With the exception of the overnight rate to December 1998, monthly and yearly values are period averages.
b. To December 1998, 3-year euro area yields are end-of-period values and 10-year yields are period averages. Thereafter, all yields are period averages.
c. Before January 1999 synthetic euro area rates were calculated on the basis of national rates weighted by GDP.
d. From January 1999, column 5 shows the euro overnight index average (EONIA); other euro area money market rates from January 1999 are euro interbank offered rates (EURIBOR).
e. The annual percentage rate of charge is the weighted average rate across all maturities and equals the total cost of the loans. These total costs comprise an interest rate component and a component of other charges.
f. Interest rates on loans up to EUR 1 million.

Table 1.16. Exchange rates
Source: ECB, Monthly Bulletin, "Euro area statistics", tables 8.1 and 8.2.
a. To December 1998, rates for the ECU (source BIS); from January 1999, rates for the euro.
b. The effective exchange rates of the euro are ECB calculated indices based on weighted averages of bilateral euro exchange rates. A positive change denotes an appreciation of the euro. Weights are based on manufactured goods trade with the main trading partners and capture third-market effects. Real rate are calculated using consumer prices (CPI). For more detailed information on the calculation of effective exchange rates, see the section 8.1 general notes in the ECB's Monthly Bulletin, which can be downloaded from the ECB's website (www.ecb.europa.eu).

NOTES TO THE TABLES OF CHAPTER 4

General note

Chapter 4 of the *Boletín Estadístico* presents information on credit institutions as a whole, and on each of the groups of institutions that come under this heading, namely deposit-taking institutions, specialised credit institutions [including specialised lending institutions (ECAOL) until 1996] and the Instituto de Crédito Oficial [including official credit banks (EOC) until May 1994). The basic source of this information is the individual confidential returns that credit institutions submit to the Banco de España for supervisory purposes in relation to their activity in Spain, in accordance with the criteria and rules laid down in the Accounting Circular CBE 4/2004 and prior provisions.

The information in Chapter 8 (Tables 8.41- 8.44) also relates to credit institutions. The difference between these two sets of data arises from the fact that they are compiled on the basis of different sources of information. Thus, while the data in this chapter are, as already mentioned, drawn from the financial statements credit institutions send to the Banco de España for supervisory purposes, those of Chapter 8 are obtained from the accounting statements used to compile statistics for the euro area and, therefore, incorporate the conceptual framework common to all the countries that make up that area. There are certain differences in sectorisation and instrument valuation (see Table 4 and the notes thereto), but the structure of these two chapters means that they can be used to complement one other. Thus, while there is greater detail in this chapter on credit instruments (commercial, mortgage, etc.), deposits (sight, time, structured, etc.), capital accounts (capital, reserves, provisions, etc.) and other assets and liabilities (accruals, derivatives, etc.), the extra detail in Chapter 8 relates to counterpart sectors and residence, indicating whether the households or NPISHs, non-financial corporations and other financial intermediaries are resident in Spain, in other euro area countries or in the rest of the world (in which case, there is no information on the counterparty). Readers' attention is drawn to these details in order that they may benefit from the complementary information in these chapters.

Table 4

As already mentioned in the general note, the balance sheet in Chapter 4 is based on the information institutions send to the Banco de España for supervisory purposes, while the balance sheet in Chapter 8 is obtained from the accounting statements used to compile statistics for the euro area and, given its purpose, is compiled on the basis of the same conceptual framework used for all the countries that make up the euro area. The reconciliation of the two chapters shows that the same set of institutions is being considered from two complementary viewpoints. There are some small differences, attributable to the different purposes of the chapters, that can, for a specific period, be appreciated in this reconciliation table:

The returns for euro area statistics (euro area returns), which are used, inter alia, as the basis for calculating the monetary aggregates monitored by the ECB, distinguish between non-resident units situated in other euro area countries and non-resident units situated in third countries, while the supervisory returns group all counterparts vis-à-vis units not resident in Spain in the sector rest of the world.

In the balance sheet compiled on the basis of the euro area statistical returns, money market funds (MMFs) are included with the Banco de España and credit institutions to form a sector called "monetary financial institutions" (MFIs). In the supervisory returns, these MMFs are included with other collective investment institutions of a financial nature in the sector “other resident sectors” (see the sectorisation schemes at the end of the Bulletin), while the grouping composed of the Banco de España and credit institutions is called the "credit system". The differences in scope between MFIs and the credit system are, in some cases, more conceptual than practical in nature, which is why these two groupings are opposite each other in the reconciliation tables.

There are some other differences in accounting rules which are not detailed in this note, since the discrepancies to which they give rise are not significant. Also, some discrepancies may be attributable to the fact that the accounting statements have been updated at different times.

Table 4.A

a. From January 2009 to April 2011 there may be small differences between total credit institutions and the sum of deposit-taking institutions, SCIs and ICO. This is because in this period electronic money institutions were considered to be credit institutions, but upon the entry into force of Directive 2009/110/EC of the European Parliament and of the Council, they ceased to be considered as such. Given the scant quantitative importance of these institutions, it was decided to retain their amount in the credit institution totals but it was not considered necessary to retain the breakdowns. The detail of this column is given in Tables 4.1 and 4.2.

b. See details in Tables 4.51 and 4.52.

c. See details in Tables 4.81 and 4.82.

Table 4.1

a. See the breakdown by subsector in Table 8.25. There are some small differences, owing to the fact that the tables use different definitions of credit and have been updated at different times.

b. See breakdown by instrument in Table 4.3.
c. See details in Table 4.4.
d. See details in Table 4.6.
e. See details in Table 4.99.
f. Includes non-performing doubtful loans which are those in respect of which some amount of principal, interest or any other contractually agreed expense is more than three months past-due or exceeds 25% of total debt (unless these loans are specifically classified as written-off assets).It corresponds to the amount of column 14, Table 4.99.

Table 4.2
a. See the breakdown by subsector in Table 8.25. There are some small differences, owing to the different definition of deposits and the fact that the tables have been updated at different times.
b. See breakdown by instrument in Table 4.5.
c. See details in Table 4.7.
d. See details in Table 4.8.

Table 4.3
a. The breakdown by institutional sector can be consulted in Table 8.26. There are some discrepancies between this amount and that in Table 8.26, owing to differences in the institutional scope and in the concept of credit and the fact that the tables have been updated at different times.
b. Hybrid financial assets are those financial assets that include simultaneously a principal contract other than a derivative and a financial derivative known as an "implicit derivative", which is not individually transferable. The flows generated by the hybrid contract normally vary in the same way as those of the derivative considered in isolation. For example, a debt instrument whose interest payments are related to a securities index.

c. Doubtful loans are loans in relation to which there is reasonable doubt regarding full repayment (of principal and interest) in accordance with the contractual terms. They include non-performing loans, which are those in respect of which some amount of principal, interest or contractually agreed expense is more than three months past-due. See details in Table 4.99. There may be differences between the amounts in these two tables, owing to the fact that they have been updated at different times.

Table 4.4
a. Short securities positions reflect the amount of the financial liabilities arising from the outright sale of financial assets acquired temporarily or received on loan. However, Table 4.4 shows short positions in the assets (columns 6 and 10) and deducts them from the total figures for "securities other than shares" of residents in Spain and in the rest of the world. Thus, columns 4 and 8 contain net figures and follow the same criterion as the returns the institutions submit for statistical purposes (and, therefore, the same criterion as Chapter 8 of this Bulletin), according to which short securities positions must be deducted from the item "securities other than shares" [see Rule 71. c) iii)].

Table 4.5
a. The breakdown by institutional sector may be consulted in Table 8.28. There are discrepancies between the amounts of these two Tables, owing to differences in the institutional scope, the fact that the tables have been updated at different times, and differences in the accounting for the acquisition of securities of securitisation special purpose entities used to securitise financial assets kept on the institution's balance sheet (see changes introduced in the *Boletín Estadístico* of January 2010).
b. Funds received under financial asset transfers include the funds raised by institutions through financial asset transfer transactions when the transferred financial asset cannot be derecognised as the risk and benefits associated with its ownership have not been substantially transferred.
c. Hybrid financial liabilities are financial liabilities that include simultaneously a principal contract other than a derivative and a financial derivative known as an "implicit derivative", which is not individually transferable. The flows generated by the hybrid contract normally vary in the same way as those of the derivative considered in isolation. For example, a deposit whose interest rate depends on the changes in the price of a share.
d. Subordinated deposits include the amount of deposits received which, for the purposes of payment priority, rank behind ordinary debt.
e. This column includes overnight deposits, savings accounts, deposits with agreed maturity and repurchase agreements. However, mortgage covered bonds with the character of deposits and funds received under financial asset transfers are not included. Mortgage covered bonds are securities whose capital and interest are secured and when they are non-marketable they are included under deposits. Funds received under financial asset transfers are defined in footnote b to Table 4.5 . The amount recorded in column 13 of Table 4.5 is broken down by province and region in Tables 4.29 and 4.31.

Table 4.6
a. See details in Table 4.9.

Table 4.7

a. The valuation adjustments to equity include the amounts of the adjustments made to assets and liabilities recorded temporarily in equity, under this heading, until they are extinguished or realised, when they are recorded in the income statement.

b. Financial assets and liabilities valuation adjustments include the difference between the valuation of the assets and liabilities in the institutions' public balance sheets and in the euro area statistical returns, except those attributable to accrued interest and impairment allowances which are presented under separate headings of the assets and/or liabilities.

c. Impairment allowances include the amounts set aside to cover impairment losses, in relation to loans and other assets.

d. Impairment allowances, total loans, include the amounts set aside to cover both specific and general insolvency risk attributable to loans and advances to other debtors.

e. Impairment allowances, specific loans, include only the amounts set aside to cover specific insolvency risk attributable to doubtful loans and advances to other resident sectors.

f. The figure of net profit (column 6) (following the same criterion of other tables in Chapter 4) includes the sum of the profit or loss of each deposit-taking institution taken individually. This figure is highly influenced by the segregation process of the savings banks' banking business to newly-created banks. Given that a significant portion of the shares of these new banks are part of the savings banks' investment portfolio, the results recorded by the banks to which the business has been transferred, are transmitted to savings banks' results, amplifying the figure of aggregate net profit (or loss) of the deposit-taking institutions as a whole. In order to facilitate interpretation of the amount of net profit (column 6), this column includes the quantity of said net profit which is due to impairment losses on investments.

Table 4.8

a. See details in Table 4.9.

Table 4.9

a. Trading derivatives include the fair value in favor of the institution of derivates which do not form part of hedge accounting.

b. Hedging derivatives include the fair value in favor of the institution of derivates designated as hedging instruments in hedge accounting.

c. Insurance contracts linked to pensions include the fair value of the insurance policies to cover staff pension commitments that do not meet the requirements established by Rule thirty-five of Banco de España Circular CBE 4/04 for not recording them in the balance sheet.

d. Tax assets include the amount of all assets of a tax nature such as taxes paid on account, assets arising from unused tax losses or credits for tax deductions.

e. Trading derivatives include the fair value of the institution's liability in respect of derivatives that do not form part of hedge accounting.

f. Hedging derivatives include the fair value of the institution's liability in respect of derivatives designated as hedging instruments in hedge accounting.

g. Tax collection accounts include the amount collected on behalf of general government in respect of taxes, duties, excise and social security contributions until such monies are finally made over to the relevant agency.

h. Tax liabilities include the amount of all liabilities of a tax nature, primarily the amount payable in respect of the tax on the taxable profit for the period.

Table 4.10

a. Includes only the amount of the specific allowances for insolvency risk attributable to loans and advances to other resident sectors.

Table 4.11

a. The details of each general government subsector can be found in Table 8.25. There are some small differences owing to the fact that the tables use different definitions of lending and they have been updated at different times. See footnote a to Table 4.A.

b. The breakdown by province and regional (autonomous) government may be consulted in Tables 4.28 and 4.29.

c. The breakdown of the total by instrument appears in Table 4.3. In addition, the breakdown by institutional sector can be consulted in Table 8.26. The small discrepancies between the amounts of this table and those of Table 8.26 are attributable to differences in institutional scope and in the definition of lending and the fact that the tables have been updated at different times.

Table 4.99

a. See notes to Table 4.1, column 12.

b. Until the entry into force of Circular 4/2004, this amount was included in column 10.

c. Until the entry into force of Circular 4/2004, these details were not available for specialised credit institutions.

d. See notes to Table 4.1 column 13.

e. Assets considered as doubtful, since there is doubt regarding full repayment although they cannot be considered non-performing or written-off assets.

f. Assets considered as doubtful because they are vis-à-vis countries in a certain risk group.

Table 4.32
a. See breakdown by subsector in Table 8.25. There are discrepancies between the amounts of these two Tables, owing to differences in the institutional scope, the fact that the tables have been updated at different times, and differences in the accounting for the acquisition of securities of securitisation special purpose entities used to securitise financial assets kept on the institution's balance sheet (see changes introduced in the *Boletín Estadístico* of January 2010).
b. See breakdown by province and region in Tables 4.28 and 4.29.
c. See breakdown by instrument in Table 4.5. Also, the amount of this column less MMF deposits at credit institutions is the same, apart from some small differences owing to the fact that the tables have been updated at different times, as that of column 1 of Table 8.28. The breakdown by institutional sector may be consulted in this latter Table.

NOTES TO THE TABLES OF CHAPTER 6

Table 6.A

a. Monetary analysis requires that coins (which are issued by the State, i.e. they are a liability of the State) should appear under Banco de España liabilities, so as to be able to calculate cash in circulation. The counterpart of this formal entry is under receivables on the asset side. Here both entries have been eliminated, their presence being meaningless when, as in this case, it is sought to reflect the financial position of the Banco de España.
b. Valuation, hierarchy and other adjustments. See breakdown in tables 7.A and 8.A.
c. According to ESA 95, gold and SDRs are not liabilities of any sector.

NOTES TO THE TABLES OF CHAPTER 7

Tables 7.A and 7.B
In designing this balance sheet reconciliation, adjustments have been to the data in the EMU returns to adapt them to those in the FASE.

a. According to ESA 95, gold and SDRs are the only financial assets for which there are no counterpart liabilities.
b. Monetary analysis requires that coins (which are issued by the State, i.e. they are a liability of the State) should appear under Banco de España liabilities, so as to be able to calculate cash in circulation. The counter part of this formal entry is under receivables on the asset side. Here both entries have been eliminated, their presence being meaningless when, as in this case, it is sought to reflect the financial position of the Banco de España.
c. In ESA 95, holdings of SDRs created by the IMF to increase its members' reserve assets are recorded on the asset side of the central bank balance sheet. These holdings which, like gold, are negative financial assets (instead of liabilities) of the Rest of the World, can be used in transactions with the IMF and with other members of the System. In the FASE, allocations of SDRs are not liabilities vis-à-vis the IMF but a change in the volume of flows of holdings. This is why they have to be deducted from liabilities, which entails greater 'own funds' for the Banco de España.
d. The figure for banknotes in AF.2 Currency and deposits under the heading "Currency" relates to euro banknotes assigned to the Banco de España in accordance with its share in ECB paid-in capital. The difference between this amount and the value of the euro banknotes placed in circulation is recorded as an Intra-Eurosystem asset/liability which is included in the same caption under the heading "Other deposits".

Table 7.1
a. See breakdown in tables 7.3 and 7.4.
b. See breakdown in table 7.5.
c. See breakdown in table 7.11.

Table 7.2
a. See breakdown in tables 7.7 and 7.8.
b. See breakdown in table 7.9.
c. See breakdown in table 7.12.
d. Including, since January 2002, the percentage of all euro banknotes in circulation allocated to the Banco de España under the accounting system established for the Eurosystem (see note to the summary balance sheet at the end of this bulletin), as well as unreturned peseta banknotes.
e. From January 2003, only the amount of banknotes allocated by the Eurosystem is included here.
f. From January 2003, only the amount of euro coins is included here.
g. Comprising the notes and coins actually put into circulation by the Banco de España (see tables 7.14 to 7.17).

Table 7.3

Table 7.5
a. See breakdown in table 7.6.

Table 7.7
a. See breakdown in table 7.8.

Table 7.9
a. See breakdown in table 7.10.

Table 7.12
a. Until December 1998 repos are included in column 3 as separate data were not available.

Table 7.13
a. The design of this table follows the IMF's Special Data Dissemination Standard (SDDS) and is, thus, an alternative to that of tables 7.1 and 7.2.

Table 7.16

a. The euro banknotes distributed by the Banco de España do not coincide with the percentage of the total value of euro banknotes in circulation that corresponds to the Banco de España under the rules for allocation of banknotes in the Eurosystem (see table7.2 and the note to the summary balance sheet included at the end of this publication).
b. Since January 2003, this total for euro banknotes, plus the total for euro coins placed in circulation by the Banco de España (table 7.17, column 1), make up the cash placed in circulation by the Banco de España (table 7.2, column 16). Until December 2002, the cash placed in circulation by the Banco de España is made up of the total for euro banknotes, plus the total for euro coins placed in circulation, plus unreturned peseta banknotes and coins (table 7.16, column 16 and table 7.17, column 17).

Table 7.17
a. Since January 2003, this total for euro coins, plus the total for banknotes placed in circulation by the Banco de España (table 7.16, column 1) make up the cash placed in circulation by the Banco de España (table 7.2, column 16). Until December 2002, the cash placed in circulation by the Banco de España is made up of the total for euro banknotes, plus the total for euro coins placed in circulation, plus unreturned peseta banknotes and coins (table 7.16, column 16 and table 7.17, column 17).

NOTICE RELATED TO THE CHAPTER 8

Changes made to the series from June 2005

This chapter includes credit institutions (along with money market funds), although with an alternative presentation to that of Chapter 4. Its tables are based on Rule seventy-one and Annex VII of CBE 4/4004 (to apply IFRS to credit institutions), approved on 22 December 2004, which refer to the EMU statistical requirements. Although the returns have not been changed significantly, they have been affected by the new accounting rules. Accordingly, although these tables continue to be updated, there have been some changes as a consequence of the entry into force of the new Circular. The most relevant are: a) savings accounts, classified until May 2005 as deposits redeemable at notice up to three months (column 12 of Table 8.44 and columns 6 and 12 of Table 8.9, among others), are now included within overnight deposits (column 9 of Table 8.44 and columns 3 and 9 of Table 8.9, among others). This change is reflected in the tables of the interest rates of these instruments (Tables 9 and 15 of Chapter 19 relating to the interest rates of credit institutions); and b) the return to the balance sheet of some of the securitised assets that had been removed from the balance sheet in application of the rules in force until the approval and entry into force of CBE 4/2004. This change has led to an exceptional increase in the amount of credit (column 6 of Table 8.41 and column 6 of Table 8.2, among others) and in time deposits (column 6 of Table 8.42 and column 6 of Table 8.3, among others).

General note: Many columns are broken down in subsequent tables, as indicated at the foot of each table.

NOTES TO THE TABLES OF CHAPTER 9

Overview

These tables, which are only available in the electronic edition of the Boletín Estadístico, contain information of the activity and financial statements of appraisal companies. The scope of this information is limited to the data compiled by the Banco de España in accordance with CBE 3/1998 of 27 January 1998 (amended by CBE 5/2003).

The tables contain information, broken down by appraised assets, on the number of appraisals (Table 9.50), on the amount of appraisals (Table 9.51) and on the appraised usable area of properties (Table 9.52). This information has been used to obtain the series on average value of appraised square metre (Table 9.53), which should not be interpreted as a reference price per unit of area, given the heterogeneity of the appraised properties included in the various aggregates. Nor can it be considered an accurate indicator of price behaviour, since it is not based on a homogeneous sample over time of appraised properties. Tables 9.54 and 9.55 give the number and amount of appraisals by type of customer and purpose of appraisal and Tables 9.56 to 9.61 contain a geographical breakdown. Finally, information is provided on the balance sheets (Table 9.62) and profit and loss accounts of appraisal companies (Table 9.63).

Notes on Tables 9.50 to 9.63

Tables 9.50, 9.51 and 9.52

h. Irrespective of whether the various buildings or parts thereof are included under the relevant headings.

NOTES TO THE TABLES OF CHAPTER 11: GENERAL GOVERNMENT

Table 11.1
a. The differences between the net lending (+) or net borrowing (-) of the Spanish National Accounts and according to the EDP arise from the inclusion in the non-financial transactions account of interest rate swaps, in accordance with Regulation (EC) No 2558/2001 of 3 December 2001, so that the profits (losses) on swaps transactions reduce (increase) interest. In the National Accounts, interest rate swaps are considered to be a financial transaction.
b. A positive (negative) sign indicates that general government has obtained profits (losses) in respect of this item.
c. Liabilities issued by general government and held by other general government units, other accounts payable and adjustments for differences between the market value and the nominal value of the liabilities net incurrence of shares and other equity (PF.5), as well as other adjustments resulting from the reclassification of institutional units and other changes in the information.
d. The figures for GDP at market prices are calculated using the official series of the Spanish Quarterly National Accounts (CNE) published by the INE, by aggregating the last four quarters as at each reference date.
Note: Any discrepancies between the data in this table and in Table 2.9 are due to revisions made after the submission of the EDP notification to the European Commission.

Table 11.2
Note: The quarterly percentages are calculated: 1) When the GDP for the four quarters of the year in question is available, using the GDP for that year; 2) when the GDP for the four quarters of the year in question in not available, using the annual GDP obtained by aggregating the quarterly GDP figures for the last four quarters.
See notes to Table 11.1.

See notes to Table 11.7.

Table 11.9
a. Annual change in column 11 of Table 11.1.
b. Column 3 of Table 11.1 with the opposite sign.

NOTES TO THE TABLES OF CHAPTER 12

Table 12.1

a. The differences between the net lending (+) or net borrowing (-) of the Spanish National Accounts and according to the EDP arise from the inclusion in the non-financial transactions account of interest rate swaps, in accordance with Regulation (EC) No 2558/2001 of 3 December 2001, so that the profits (losses) on swaps transactions reduce (increase) interest. In the National Accounts, interest rate swaps are considered to be a financial transaction.
b. A positive (negative) sign indicates that central government has obtained profits (losses) in respect of this item.
c. Liabilities issued by ceneral government and held by other central government units, other accounts payable and adjustments for differences between the market value and the nominal value of the liabilities net incurrence of shares and other equity (PF.5), as well as other adjustments resulting from the reclassification of institutional units and other changes in the information.
d. The figures for GDP at market prices are calculated using the official series of the Spanish Quarterly National Accounts (CNE) published by the INE, by aggregating the last four quarters as at each reference date.

Table 12.2

Note: The quarterly percentages are calculated: 1) When the GDP for the four quarters of the year in question is available, using the GDP for that year; 2) when the GDP for the four quarters of the year in question in not available, using the annual GDP obtained by aggregating the quarterly GDP figures for the last four quarters.
See notes to Table 12.1.

Table 12.3

a. Annual change in column 11 of Table 12.1.
b. Column 3 of Table 12.1 with the opposite sign.
c. A positive figure means that this item increases debt and a negative figure means that it decreases debt.
d. Breakdown of column in Table 12.5.
e. Includes effects such as those produced by the reclassification of institutional units or financial instruments.
f. Includes adjustments for interest accrued less interest paid, for issue or redemption premiums, for the difference between the nominal and cash amount of discounted issues, for capital losses or gains arising from early payment of liabilities and net incurrence of shares and other equity (PF.5).

Table 12.4

See notes to Table 12.3

Table 12.6

a. Breakdowns of securities other than shares by instrument and of issues denominated in euro and in other currencies are given in Tables 21.12, 21.13 and 21.15. The difference between column 4 of this table 'Total securities other than shares' and column 1 of Table 21.12 'Total securities other than shares, except financial derivatives' arises from the fact that debt according to the methodology of the excessive deficit protocol excludes the securities held by other general government units and takes currency swaps into account.
b. Not deducted from column 1.

Table 12.10

a. The units included here as public enterprises are the main non-administrative agencies, entities and enterprises not classified under central government. For ease of comparison with the central government debt shown in this chapter, the debt of public enterprises shown in this table has been calculated using the EDP methodology. The debt of public enterprises does not fall within the scope of the EDP and, therefore, unlike the debt of general government (public debt), it is not included in the notifications sent to the European Commission.
b. As a consequence of the reallocation of assets and liabilities prompted by RDL 7/2004 of 27 September 2004, between November and December 2004, an amount of €5,458 million that formed part of the debt of RENFE was assumed by the State.
c. Law 39/2003 on the railway industry of 17 November 2003 reorganised the state railway industry, the management of the railway infrastructure (which was previously entrusted to RENFE and GIF) being entrusted to ADIF. Also RENFE-Operadora was set up, as a company providing railway transport services. This company assumed the resources and assets previously assigned by RENFE to the provision of railway services.

Table 12.11

a. The differences between the net lending (+) or net borrowing (-) of the Spanish National Accounts and according to the EDP arise from the inclusion in the non-financial transactions account of interest rate swaps, in accordance with Regulation (EC) No 2558/2001 of 3 December 2001, so that the profits (losses) on swaps transactions reduce (increase) interest. In the National Accounts, interest rate swaps are considered to be a financial transaction.
b. A positive (negative) sign indicates that social security funds have obtained profits (losses) in respect of this item.

c. Liabilities issued by social security funds and held by other social security funds, other accounts payable and adjustments for differences between the market value and the nominal value of the liabilities net incurrence of shares and other equity (PF.5), as well as other adjustments resulting from the reclassification of institutional units and other changes in the information.
d. The figures for GDP at market prices are calculated using the official series of the Spanish Quarterly National Accounts (CNE) published by the INE, by aggregating the last four quarters as at each reference date.

Table 12.12

See notes to Table 12.11.

Table 12.13

b. Column 3 of Table 12.11 with the opposite sign.

f. Includes adjustments for interest accrued less interest paid, for issue or redemption premiums, for the difference between the nominal and cash amount of discounted issues, for capital losses or gains arising from early payment of liabilities and net incurrence of shares and other equity (PF.5).

NOTES TO THE TABLES OF CHAPTER 13: REGIONAL (AUTOMOMOUS) GOVERNMENTS

Table 13.1

a. The differences between the net lending (+) or net borrowing (-) of the Spanish National Accounts and according to the EDP arise from the inclusion in the non-financial transactions account of interest rate swaps, in accordance with Regulation (EC) No 2558/2001 of 3 December 2001, so that the profits (losses) on swaps transactions reduce (increase) interest. In the National Accounts, interest rate swaps are considered to be a financial transaction.

b. A positive (negative) sign indicates that regional (autonomous) governments have obtained profits (losses) in respect of this item.

c. Liabilities issued by Regional (autonomous) Governments and held by other Regional (autonomous) Governments, other accounts payable and adjustments for differences between the market value and the nominal value of the liabilities net incurrence of shares and other equity (PF.5), as well as other adjustments resulting from the reclassification of institutional units and other changes in the information.

d. The figures for GDP at market prices are calculated using the official series of the Spanish Quarterly National Accounts (CNE) published by the INE, by aggregating the last four quarters as at each reference date.

Table 13.2

Note: The quarterly percentages are calculated: 1) When the GDP for the four quarters of the year in question is available, using the GDP for that year; 2) when the GDP for the four quarters of the year in question in not available, using the annual GDP obtained by aggregating the quarterly GDP figures for the last four quarters.

See notes to Table 13.1.

Table 13.3

a. Annual change in column 11 of Table 13.1.

b. Column 3 of Table 13.1 with the opposite sign.

c. A positive figure means that this item increases debt and a negative figure means that it decreases debt.

d. Breakdown of column in Table 13.5.

e. Includes effects such as those produced by the reclassification of institutional units or financial instruments.

f. Includes adjustments for interest accrued less interest paid, for issue or redemption premiums, for the difference between the nominal and cash amount of discounted issues, for capital losses or gains arising from early payment of liabilities and net incurrence of shares and other equity (PF.5).

Table 13.4

See notes to Table 13.3.

Table 13.7

a. A breakdown of issues into those denominated in euro and those denominated in currencies other than the euro is given in Table 21.18 The difference between column 3 of this table, 'total debt securities issued' and column 1 of table 21.18 'total debt securities issued excluding financial derivatives' arises from the fact that debt according to the methodology of the excessive deficit procedure takes into account the currency swaps carried out by the various regional (autonomous) governments.

Table 13.8

a. Includes the governing bodies of the regional (autonomous) governments.

b. The figures for GDP at market prices are calculated using the official series of the Spanish Quarterly National Accounts (CNE) published by the INE, by aggregating the last four quarters as at each reference date.

Table 13.9

a. Each regional (autonomous) government includes the units concerned with the general administration of the region, the universities located within its territory and those bodies and enterprises reporting to the regional (autonomous) government that are classified under general government. The Autonomous Cities of Ceuta and Melilla are classified in subsector Local Governments of the national accounting system.

b. The provincial councils of the Basque Country are classified in subsector Local Governments of the national accounting system. Table 14.8, column 16, provides information about the debt of the provincial councils of the Basque Country

Table 13.10

c. The figures for GDP at market prices used for the total are calculated using the official series of the Spanish Quarterly National Accounts (CNE) published by the INE, by aggregating the last four quarters as at each reference date. For the individual regional (autonomous) governments, until 2008, the regional GDP mp published in the Spanish Regional Accounts (CRE) of the INE has been used for the years the information was available. For the rest of years, the structure of the last regional GDP mp figure published by the INE has been applied to the national GDP mp.

See notes to Table 13.9.

Table 13.11

a. The units included here as public enterprises are the main non-administrative agencies, entities and enterprises of the regional (autonomous) governments, which are classified as Public Administration. For ease of comparison with the general government debt shown in the previous tables (which is public debt, as narrowly defined), the debt of public enterprises shown in this table has been calculated using EDP methodology. The debt of public enterprises does not fall within the scope of the EDP, and therefore, unlike the debt of general government (public debt), it is not included in the notifications sent to the European Commission.

Table 13.12

b. The figures for GDP at market prices used for the total are calculated using the official series of the Spanish Quarterly National Accounts (CNE) published by the INE, by aggregating the last four quarters as at each reference date. For the individual regional (autonomous) governments, until 2008, the regional GDP mp published in the Spanish Regional Accounts (CRE) of the INE has been used for the years the information was available. For the rest of the years, the structure of the last regional GDP mp figure published by the INE has been applied to the national GDP mp.
See notes to Table 13.11.

NOTES TO THE TABLES OF CHAPTER 15

Table 15.A

a. Owing to the unavailability of the appropiate population estimator, the data for the agriculture, livestock, forestry and fisheries sectors in column 2 are not extrapolated to obtain the totals for the balance sheet and profit and loss account in Table 15.C.

Table 15.B

Table 15.C

a. Definition of the ratios:

R1 = [(27+29)/(10-14-17)]*100
R2 = [27/(13+16)]*100
R3 = (29/11)*100
R4 = R1 - R2
R5 = (24/18)*100
E1 = [(13+16)/(10-14-17)]*100
E1'= [(13+16)/(10-14-17-4)]*100
E2 = (13+16)/(24+25)

Note: Ratios FSI.1 and FSI.2nd have been prepared in accordance with the methodology defined by the IMF in its document Financial Soudness Indicator. Compilation Guide.

a. Changes in assets and liabilities are both net of repayments.
b. Mainly loans, deposits, sell/buy back transactions and repurchase agreements.
c. A negative (positive) sign indicates an increase (decrease) in the Banco de Españ:a's claims on the rest of the world.

Table 17.6
a. Patents, copyrights, trademarks, leases and other transferable contracts.

Table 17.16
a. Includes transport support and ancillary services.
b. Includes merchanting.
c. Includes leases of means of transport without crew.

Table 17.17
Note: The Spanish Balance of Payments services data continue to be calculated largely on the basis of the general system of information on external receipts and payments (see the annual publication "The Spanish Balance of Payments and the International Investment Position 2006", Chapter 5.2). Accordingly, the geographical breakdown may be distorted insofar as it reflects the countries involved in receipts and payments, which do not always coincide with the countries of residence of the parties providing or enjoying the service.

Table 17.21
a. From December 2002, portfolio investment data have been calculated using a new information system (see Banco de España Circular 2/2001 and note on changes introduced in the economic indicators). The incorporation of the new data under the heading 'shares and mutual funds' of other resident sectors entails a very significant break in the time series, both in the financial assets and the liabilities, so that the series have been revised back to 1992. This methodological change introduced by the new system also affects the rest of the headings, to some extent, but does not justify a complete revision of the series.

b. The counterpart entry of allocations of SDRs by the IMF is not included. These allocations (whose amounts, for Spain's case, may be deduced from table 17.26) have been recorded following the methodology laid down in the Fifth Edition of the IMF's Balance of Payments Manual, which is currently used for the compilation of the Balance of Payments (BP) and IIP statistics. The allocations of SDRs have therefore been recorded in the IIP as an increase in reserve assets, with no counterpart in any other caption, and they have not been recorded as transactions in the BP.
The Sixth Edition of the above-mentioned Manual, which was recently completed and which countries will progressively adopt according to their national plans, establishes, on the contrary, that the allocations of SDRs will entail, in addition to increases in reserve assets, an increase in the long-term liabilities of the recipient country. Therefore, according to this Manual, the allocations of SDRs shall be recorded under reserve assets and, moreover, under other investment liabilities, whereby the country's net IIP will not be affected. Furthermore, both the change in reserve assets and in other investment liabilities shall be recorded as transactions in the BP. The IMF has decided to apply, in its publications, the new methodological standard for SDR allocations following the August and September 2009 allocation. Conversely, in order to adopt the new methodological criteria for accounting laid down in the Sixth Edition of the Manual, European Union countries must await the amendment of the Community and ECB regulations governing the co-ordinated compilation and dissemination of statistics. This amendment is expected to be made as from 2014, meaning that until that date the IMF data published on Spain will differ from those disseminated in national data.

Table 17.22
Note: See footnote a to Table 17.21

Table 17.23
Note: See footnote a to Table 17.21.

Table 17.25
a. A minus (plus) sign denotes a decrease (increase) in liquidity.
b. The amounts in this column coincide with those in column 1 of Table 17.26.

Table 17.26
Note: From January 1999 reserve assets do not include claims denominated in euro or claims on residents in euro area countries denominated in foreign currencies (these headings appear in Tables 7A, 7.5 and 7.11). The data in pesetas to December 1998 were translated into euro using the irrevocable exchange rate. Since January 1999, all reserve assets have been valued at market prices.
Since January 2000 the reserve assets data have been compiled in accordance with the IMF's "International Reserves and Foreign Currency Liquidity Guidelines for a Data Template" , of October 2001. Under this new definition, the total amount of reserve assets as at 31 December 1999 would have been EUR 37,835 million, and not EUR 37,288 million included in the series.
The main items of reserve assets are updated the first week of each month with reference to the end of the previous month and are disseminated in the economic indicator 7.8.

Table 17.27
a. See footnote a to Table 17.21.
b. See footnote b to Table 17.21.

Table 17.28
Note: See footnote a to Table 17.21.

Table 17.29
a. See footnote b to Table 17.21.

Table 17.30
a. This adjustment to column 7 is required because loans from foreign parent companies and indirectly related foreign companies are included as direct investment in column 4 of Table 17.27 and loans from foreign subsidiaries reduce the figures for direct investment in column 4 of Table 17.22 and it has not been possible to deduct these items from the series by type of firm (columns 8 to 14).

Table 17.31
a. These amounts are deducted from column 1 but not from the other columns (see note to Table 17.30).

a. To December 2002 this includes:"Wind energy, urban solid waste and other solid fuels". From January 2003:"Wind energy, solar energy, biomass and residues (Renewable energies)". In 2010 Q2 there was a methodological change in the series relating to the production and consumption of "Renewable energies". This involves the inclusion for the first time of consumption for the final use of these energies. The change affects these series from January 2005. The monthly series are only available from April 2008. Accordingly, from January 2005 to March 2008, the montly data were estimated by applying to the available annual totals the percentage accounted for by each month in the annual total in the series not included in consumption for final use.

Note: For all the monthly data, the annual figures do not always coincide with the annual addition of the monthly figures, in which case the difference is distributed evenly over the year.

a. The new definition of unemployment applies from 2001 Q1 onwards, entailing a break in the series.(See www.ine.es).

General note to the tables: As a result of the change in the population base (2001 Census), all the series in this table have been revised as from 1996. In addition, since 2005 Q1 the new obligatory variables referred to in Regulation (EC) 2257/2003 (on the adaptation of the list of labour force survey characteristics) have been included, a centralised procedure for telephone interviews has been set in place and the questionnaire has been modified. Thus, in 2005 Q1, there is a break in the series of some variables. For further information, see www.ine.es.

a. On 3 May 2005, the new SISPE management model came into operation. This has involved a change in the way registered unemployment is obtained (basically, those groups that should be excluded from outstanding demand are calculated in another way owing to an improvement in the data cross-checking processes). The inclusion of the new registered unemployment data entails a break in the series in January 1996.

b. Homogeneous time series published by the INEM begin in January 1996.

c. Homogeneous time series published by the INEM begin in February 2001.

d. To December 2008, NACE 1993; from January 2009, NACE 2009.

a. On 3 May 2005, the new SISPE management model came into operation.This has involved changes and breaks in the series in this table.

b. There was a break in new vacancies and in de-registered vacancies in 1994 (Royal Decree Law 18/1993). Since May 2005, these items relate to jobs offered by employers. The outstanding vacancies cannot be determined. The number of jobs de-registered may exceed the number initially offered.

c. There is a break in May 2005. Only the movements actually registered are compiled. Simultaneous registration and de-registration does not take place for each new contract.

d. The entry into operation of the new SISPE management model entailed a change in the classification of placements. The new classification is not homogeneous with the previous one, and this brought about a break in the series from May 2005. Previously placements were classified as "Without intermediation on INEM" (up to 1993) and "With intermediation of INEM" (since 1994).

a. The annual data include agreements registered after the end of the year and inflation-adjustment clauses. Consequently, the cumulative monthly data to December do not coincide with the annual data.

b. The information on the number of collective bargaining agreements registered to 31 January 2013 with economic effects in 2013 is not homogeneous with respect to that of the same period a year earlier. The agreements registered to 31 January 2012 included 568 multi-year agreements with economic effects prior to 2012.

c. Annual data: to 2004, NACE 1993; from 2005, NACE 2009. Monthly data: to December 2008, NACE 1993; from January 2009, NACE 2009.

(a) Seasonally adjusted series. In the case of countries, except Switzerland, the series are also adjusted for the calendar effect.
(b) The data for the euro area countries up to 1998 Q4 have been obtained applying the irrevocable euro conversion rates to the national currency series. As the euro area aggregate for that period has been obtained applying the respective exchange rates in ECU to the national currency series, this aggregate is not equal to the sum of the constituent countries.
(c) This series has been converted into US dollars using gross domestic product purchasing power standards in 2000, as per the methodology published by the OECD.
(d) The EU and euro area data are from Eurostat. For further methodological details, see Eurostat News Release no. 151/2005 and the methodological note referred to therein, 'Changes to National Accounts in 2005'. Both are dated 30 November 2005.

The counterpart of this adjustment is recorded as an Intra-Eurosystem liability related to banknote issue. The remaining 92% of the value of the euro banknotes in circulation are allocated to the NCBs on a monthly basis too, whereby each NCB shows in its balance sheet a share of the euro banknotes issued corresponding to its paid-up share in the ECB´s capital. APPENDIX 3 METHODOLOGICAL NOTES

NOTES TO THE TABLES OF CHAPTER 10

INSURANCE CORPORATIONS AND PENSION FUNDS

Introduction

According to the provisions of the ESA 95, insurance corporations and pension funds form a sub-sector within the sector financial institutions. The inclusion of these entities within the sector financial institutions is basically due to the fact that their principal activity, the coverage of risks, involves significant intermediation of financial resources from some sectors to others. In recent years, the activity of this sub-sector has been growing significantly. This can be attributed not only to the increase in the desire of the population to cover the different types of risk that these entities offer but also to the growing use of a certain range of products as vehicles for saving.
The following sections of this note describe the various groups of agents that make up this sub-sector (section 2), the sources of information used and availability of the data (section 3); and the specific information contained in the various tables that make up this chapter (section 4).

The agents who make up the sub-sector

This sub-sector comprises four different groups of agents: private insurance corporations, mutualidades de previsión social (non-profit insurance entities), the Consorcio de Compensación de Seguros (insurance compensation consortium) and pension funds, all of which come under the supervision of the Directorate General of Insurance and Pension Funds (DGSFP).

- **Private insurance corporations** include the activity of public limited companies whose capital may be entirely Spanish, entirely foreign or a mixture of the two, private mutual insurance associations, the offices in Spain of foreign insurance corporations and reinsurance corporations resident in Spain (1).

- **Mutualidades de previsión social** are private beneficent entities generally set up by particular groups as a form of corporate support (they provide small benefits in the event of death, birth, etc. and grant small loans). They are independent of the body they originate from (companies, associations, etc.) and their purpose is to supplement social security pensions. Their main resources are the direct contributions of the members or other persons or patron entities. Membership of these entities may be voluntary or compulsory (for persons belonging to certain professional associations, groups or companies). This group includes cajas de pensiones sustitutorias (substitute pension funds), which existed until 1984 in the Spanish insurance system. These funds were created by particular groups in order to act as substitutes for the Social Security System. Additional provision five of the 1984 budget law required the groups covered by these funds (both retired and active employees) to be transferred to the Social Security System, so that the role of these entities then became one of supplementing social security, a status that they still have today.

- **The Consorcio de Compensación de Seguros (CCS)** is a public law entity with its own legal personality. Its object is to cover extraordinary risks to persons and property. It is basically financed by surcharges on the premiums paid by policyholders of all types of insurance, by State grants and loans and by direct premiums. In addition, it acts as the State's agent in dealings with the Spanish export credit company (CESCE), the public-sector private insurance corporation of which manages, on behalf of the State, the cover of political risks and certain commercial risks to Spanish exports. This latter activity of the CCS is not included in the series, since it is attributed directly to the State.

- **Pension funds** sare funds created pursuant to Law 8/1987 of 8 June 1987. They are portfolios of assets separate and independent from the entities that promote them, but without separate legal status. They are made up of funds earmarked for the purposes laid down in the corresponding pension scheme. Their management is entrusted to a managing entity and a custodian, under the supervision of a control committee. These funds are usually known as "autonomous" or "external pension funds" in contrast to "non-autonomous" or "internal pension funds", which are those created by certain credit institutions and non-financial corporations by means of transfers of funds to provisions or internal reserves. Internal funds appear on the balance sheet of the sector or sub-sectors that have created them (other financial institutions and non-financial corporations) and represent a liability to the workers (households) with interests in them. Normally, the balance sheet does not show any separate assets to cover the aforementioned pension rights.

Sources and availability of information

- **Private insurance corporations** The main source of data is the annual balance sheets and other supplementary information that insurance corporations send to the DGSFP, which is published annually in its reports. Annual aggregate data for this group are available from 1962, and relate to three different accounting plans (1962-1982, 1983-

1997 and 1998 onwards). As a result, the compilation of time series has required the Banco de España to chain the different series. This has been done by adapting the information of the two plans prior to 1998, without any breaks arising that are worthy of mention. First, the differences attributable to the different coverage in different years, indicated in footnote 1, were small at the time the chaining was carried out and, second, the other differences due to the change in the accounting plan were, likewise, minor. Also, for a sample of entities whose insurance technical provisions account for approximately 98% of the total, quarterly information is available from 1986, although with certain limitations. Specifically, this quarterly information does not include data on reinsurance entities and data are not available for the quarters of 1990 and for the first three quarters of 1998, so that in the time series these quarters are shown as unavailable.

- **Mutualidades de previsión social** Information is available from 1970, with differing content, and is obtained from the following sources:

  For the period 1970-1984 the data come from the individual balance sheets of the entities themselves and from the incomplete and heterogeneous information of the Labour and Social Security Ministry (to which they reported until 1984) and the Economy Ministry. The Banco de España has estimated the series on the basis of these data.

  For the period 1985-1997, inclusive, data are available from the annual statistical reports of the DGSFP, which include information relating to the mutualidades with a national scope, which are supervised by this Directorate General, and the information on entities under the supervision of the regional governments, following the transfer of responsibilities in this area.

  For 1998 the series only include the data of the mutualidades de previsión social with a national scope, obtained from the quarterly reports of the DGSFP, and of the Catalan and Basque regions' mutualidades for which information is supplied directly by these two regional governments.

  Since 1999 the series are Banco de España estimates based on the reports of the Spanish Confederation of Mutualidades. These estimates will be replaced by official data as and when they become available.

- **Consorcio de Compensación de Seguros** The data available for the period 1970-1982 are incomplete and from various sources, primarily the three bodies which in 1982 were merged to form the current CCS: the CCS itself, the Fondo Nacional de Garantía (National Guarantee Fund) and compulsory travel insurance. The Banco de España has estimated the relevant time series using this information. From 1983 the data are from the annual reports of the CCS itself.

- **External pension funds** Data are available from when these funds began to be created in 1988. The source is the annual statistical reports published by the DGSFP.

The information contained in the tables of the chapter

The chapter begins with a table (10.A) which reconciles the different headings of the annual balance sheet which the various agents that make up the sub-sector send to the DGSFP for supervision purposes and the instruments that, following ESA 95 methodology, are included in the Financial Accounts of the Spanish Economy (FASE). The reconciliation is between the latest balance sheet published by DGSFP and the FASE for the same year.

When analysing this table two important issues should be taken into account:

- For some headings, the balance sheet figure is not taken as the figure for the FASE, but rather data are taken from alternative sources available for the same headings, following the order of hierarchisation of statistical sources that governs the preparation of the FASE (the insurance corporations and pension funds figure is subordinated to that obtained from other sources). The difference between these two data is explicitly shown as a "difference due to hierarchisation" in column 9 of the table. This difference arises in the case of deposits and loans vis-à-vis credit institutions, which are taken from the latter, and in that of deposits (for reasons other than reinsurance) vis-à-vis the rest of the world, which are taken from the balance of payments. This item also includes the differences arising from the different scope of the headings other accounts receivable/payable in the FASE and other assets/liabilities in the balance sheet of insurance corporations and pension funds.

- The securities headings of the FASE show market-price data, as laid down by the ESA 95. As this principle is not applied in the balance sheets of the various agents a "valuation difference" arises which is explicitly shown in column 10 of the table.

  The other tables include, in the form of time series, the accounting/administrative information obtained from the DGSFP, the regional governments that supply data and the CCS, which corresponds to the first row of Table 10.A (2).

The purpose of Table 10.1 is to give an overall view of the relative importance of each of the four groups of entities that make up the sub-sector based on the aggregate balance sheet and the most important item therein: the technical provisions and own funds, in the case of pension funds. Thereafter, Tables 10.2 to 10.6 provide certain details of the assets and liabilities of the aggregated balance sheet of the sub-sector (Table 10.2) and of each of the groups of agents of which it is composed (Tables 10.3 to 10.6). The structure of all these tables is identical so that some minor adaptations have had to be made to the format of the balance sheet which each group of agents sends to the DGSFP.

Footnotes

- Until 1997 (inclusive), the annual series presented include the activity in Spain of corporations resident in Spain (i.e., both those of Spanish nationality and the branches of foreign entities). Since then, information on the insurance business in Spain of branches that have their head office in other EU countries is not included, since the current legal framework makes no provision for these branches to submit information. As for the quarterly series, from 1996 Q1 these include the activity both in Spain and abroad of entities of Spanish nationality. In addition, from 1998, as in the case of the annual series and for the same reason, these series do not include the activity in Spain of the branches of entities that have their head office in other EU countries.

- Time series based on the approach of the Financial Accounts of the Spanish Economy (last column of Table 10.A) are available in the publication Financial Accounts of the Spanish Economy.

METHODOLOGICAL NOTE

GENERAL GOVERNMENT DEBT COMPILED ACCORDING TO THE METHODOLOGY OF THE EXCESSIVE DEFICIT PROCEDURE (EDP)

Introduction

The functions attributed to the Banco de España by Spanish legislation and, specifically, by the Banco de España Law of Autonomy and successive National Statistics Plans include notably, the compilation of a set of statistics, comprising government debt according to the EDP. Thus, the Banco de España regularly publishes on the Internet quarterly information about government debt in its *Boletín Estadístico*.

This note describes the methodology used to compile EDP debt. The next section presents the various concepts of debt or indebtedness which are habitually used, depending on the context to which they refer. Then section three provides a description of the methodology applied. Lastly, section four details the information published by the Banco de España.

Different concepts of indebtedness

In the framework of any agent's economic activity, expenses (including the net acquisition of financial assets) not financed with current revenue and capital, must be financed through the net contraction of liabilities. This generation of liabilities is usually called debt or indebtedness; however, it is necessary to differentiate between the contraction of liabilities over a period of time (flows) and the outstanding balance of these liabilities at a specific time (stocks). Consequently, flows (operations in the period) are formally called a net change in liabilities and stocks are formally called debt, indebtedness or outstanding liabilities. Several concepts are encompassed within this general definition of indebtedness, which are delimited by the instruments included and the methods used for their valuation, and which, consequently, must be considered together with the general definition itself. This section describes the varying coverage of the frequently used main concepts of indebtedness and Scheme 1 provides a comparison of them.

1. Total liabilities

This is the broadest possible concept of indebtedness and is reflected in the Financial Accounts of the Spanish Economy (FASE), a quarterly publication of the Banco de España with a high degree of detail (http://www.bde.es/webbde/en/estadis/ccff/ccff.html). Chapter 2 of this publication presents the financial transactions (flows) and financial assets and liabilities (stocks) for all the sectors and subsectors into which the economy is classified, including general government. Thus, in this specific case, the FASE provide information about the financial activity of government in a full and consistent fashion which is integrated with the other sectors and subsectors of the economy and with general government non-financial operations; therefore, they serve as a global framework of reference for analysing general government financial activity as a whole. This publication takes the broadest possible concept of indebtedness because it includes all the liabilities incurred by general government, irrespective of type (issuance of currency, securities other than shares, equity, short and long-term non-commercial loans in euro or in other currencies, trade credits and other outstanding payables). The liabilities included in this concept are valued using the methodology established by the 1995 European System of Integrated Economic Accounts (ESA 95) described in the methodological note of the FASE disseminated on the Banco de España webpage (http://www.bde.es/webbde/SES/Secciones/Publicaciones/PublicacionesSeriadas/NotasEstadisticas/07/nest05e.pdf) and which uses market values in the valuation of stocks and flows of liabilities held in the form of securities other than shares.

The change in this indebtedness is explained by: a) net borrowing i.e. non-financial expenses less non-financial resources, according to the National Accounts criterion which, in turn, must follow the ESA 95 rules; b) the net acquisitions in financial assets; and, c) adjustments for valuation (which arise, for example, in the case of securities other than shares and liabilities in currencies other than the euro).

2. Debt compiled according to the EDP

This concept of indebtedness is not as broad as the previous one. The Banco de España publishes a detailed breakdown of this debt concept for each of the subsectors comprising general government and it is disseminated with a shorter time lag than the FASE. Likewise, it provides a very complete breakdown by instrument since it distinguishes:

- Currency and deposits (coin issuance)
- Securities other than shares , in euro and currencies other than the euro, by original maturity.
  - Short-term
  - Medium and long-term
- Loans and credits
  a) Granted by resident credit institutions, in euro and currencies other than the euro, by original maturity.
     - Short-term (12 months or less)
     - Medium and long-term (more than 12 months)
  b) Granted by non-residents, in euro and currencies other than the euro (rest of the world)

The concept of “Debt compiled according to the EDP” is different to the concept of “Total liabilities” in that it does not include general government liabilities held by other general government units, trade credit and other accounts payable. Furthermore, the valuation methods of the liabilities which are used in debt compiled according to the EDP are those described in Section 3.

Scheme 1

General government: different concepts of indebtedness

Percentage structure at 31.12.2012

Instrument		Total liabilities	Debt compiled according to the EDP
Currency and deposits		0.3%	0.3 %
Securities other than shares	Securities held by general government units	5.9%	
	Other securities (short, medium and long-term)	57.3%	56.9%
Long-term non-commercial loans held by general government units		9.9%	
Other long-term non-commercial loans		16.7%	16.7%
Short-term non-commercial loans		1.2%	1.2%
Trade credits and other liabilities		8.6%	
Percentage of total liabilities		**100%**	**75.1%**

These two concepts of indebtedness are not the only ones possible. Other definitions have been defended in order to value this aspect of public finances such as, for example, that it would be necessary to deduct from gross debt, as envisaged in the two concepts included in this section, the stock of financial assets, since a distinction must be made between when an economic agent increases its indebtedness in order to finance a deficit and when it does so to acquire financial assets. Any concept of indebtedness has its own meaning and is valid for economic analysis provided that the area to which it refers is specified in detail. Nevertheless, it is considered of interest to underline that the concept of debt compiled according to the EDP has the virtue of being defined according to uniform binding rules for all EU countries and it is scrutinised in depth by the European Commission (Eurostat), therefore, it is comparable between the various EU Member States. This is not the case for any definition set with the criteria of only one country. Additionally, the concept of debt compiled according to the EDP is useful at a practical level since, on one hand, it is that for which data are published with the shortest time lag and, on the other, changes in it are a good proxy of total liabilities. Total liabilities is the concept of debt used in the financial accounts compiled by all EU Member States.

Debt according to the EDP

The definition of this indebtedness is regulated by Council Regulation EC No 479/2009 of 25 May 2009, which refers, in turn, to the ESA to delimit the main terms used. This regulation amended Regulation 3605/93 of 22 November 1993. Among other things, this regulation requires EU Member States to report to the European Commission and, specifically, to Eurostat, twice per year (at end-March and end-September) the data corresponding to this definition of debt by subsectors and with an ample breakdown of certain items and transactions. The reporting of these data are called EDP debt Notifications.[1]

For the purposes of this Note, Regulation No 479/2009, like its predecessor, Regulation 3605/93, defines the concepts of general government and government debt as follows:

1. Institutional scope of general government

Regulation 479/2009 specifies that the general government sector includes the subsectors: central government, regional (autonomous) government, local government, and social security funds, excluding commercial operations as defined in ESA 95. The exclusion of commercial operations means that the general government sector comprises only institutional units producing non-market services as their main activity.

[1] It should be clarified that the second edition of the ESA published in 1979 (ESA 79) was in force until the EDP Notification of September 1999 inclusive. As of the EDP Notification of March 2000, the ESA corresponding to 1995 (ESA 95) has been in force. Interestingly, this new version of the ESA is the first system of national accounts which has been introduced via a legal text, namely Council Regulation (EC) No 2223/96 of 25 June 1996 (called the ESA 95 Regulation) and it therefore constitutes a legal obligation for EU countries. The previous edition of the ESA was only a "recommendation" to countries for compiling national accounts which were as uniform as possible.

In the case of Spain, the general government sector comprises the following four subsectors:

- ***Central government*** comprises institutional units which have general powers throughout the country and which, in Spain, include the State, the central government agencies and corporations classified as central government.
- ***Regional (autonomous) government*** which includes the governing bodies of the regional (autonomous) government and the regional administrative and similar agencies. The latter group includes the universities in each region and, also, the corporations classified as regional (autonomous) government.
- ***Local government*** comprises local (municipal, provincial and island) authorities, associations and groupings of municipalities, autonomous cities (Ceuta and Melilla) and the independent administrative and similar bodies reporting to them.
- ***Social security funds*** which include the institutional units of a legal nature and with diverse territorial scope that undertake functions relating to the provision of social benefits. Since 2000 Q1, in accordance with the sectorisation of base year 2000 and base year 2008 of the Spanish National Accounts complied by the INE, the units performing social security functions financed through general taxation (essentially healthcare services) are classified together with the units to which they report in the central government, regional (autonomous) government and local government subsectors, whereas the units performing social security functions financed through social security contributions are classified in the social security fund subsector.

All these subsectors have two basic characteristics: a) they comprise institutional units whose main function is to produce non-market goods and services and/or to undertake operations to redistribute national income and wealth and, b) their principal funds come from compulsory payments made by other institutional units and not from the sale of their production.

In other words, in order to decide whether or not an institutional unit must be included in the general government sector two criteria must be taken into account: the institutional legal criterion (determining whether a unit is a public or private producer) and the economic criterion, according to the nature of the production (determining whether a unit is a market or non-market producer). On the basis of the first criterion, those institutional units controlled by general government are included in public producers. On the basis of the second criterion, those institutional units which cover more than 50% of their production costs with revenue from the sale of their products are considered market producers. The second criterion involves, in fact, subordinating the legal criterion to the economic one when including institutional units in, or excluding them from, the general government sector and its subsectors, since a unit may be of a commercial nature from a legal viewpoint but it does not comply with the 50% rule, in which case it will be sectorised under general government.

2 Concept of government debt

Under Regulation 479/2009 government debt means the total gross debt at nominal value outstanding at the end of the year of the sector of general government with the exception of those liabilities the corresponding financial assets of which are held by the sector of general government. Nominal value corresponds to face value. In the case of index-linked liabilities, the regulation specifies that their nominal value shall correspond to their face value adjusted by the index-related change in the value of the principal accrued to the end of the year.

As for the financial instruments which must be included, government debt shall be constituted by the liabilities of general government in the following categories according to the definitions of ESA 95: currency and deposits, securities other than shares, excluding financial derivatives, and loans.

Under the regulation, liabilities denominated in foreign currencies shall be converted into the national currency on the basis of the representative market exchange rate prevailing on the last working day of each year.

In the case of Spain, the instruments and statistical sources used are included in Scheme 2 below:

The valuation rules used are as follows: the short, medium and long-term securities other than shares are recorded at their nominal value; credits only include the part drawn down. In both cases, where the currency in which the securities other than shares are issued or in which the credit is arranged is not the euro, they are converted into euro applying to the currency in which the securities other than shares were originally issued or in which the credit was arranged, the exchange rate of that currency at the end of the period to which the outstanding balance refers.

From the foregoing it can be deduced that the Banco de España's statistics show an estimate of the indebtedness represented by securities other than shares and non-commercial loans based on sources which are mostly external to the governments and bodies whose debt is being calculated. This reason explains why the amounts obtained from each of these governments may not coincide exactly with the amounts in the latter's internal records, which obviously are the best source of the indebtedness of any government. However, in order to compensate for this limitation, monthly tests are performed in the case of the State and quarterly tests are undertaken in the case of the regional (autonomous) communities and main local governments (local authorities with more than 500,000 inhabitants) with information from their own internal records.

Dissemination of information on government debt in the Banco de España's *Boletín Estadístico*.

In Chapters 11 to 14 of the *Boletín Estadístico* published on its website, the Banco de España disseminates information about the debt of general government, i.e. of the institutional units classified in the general government sector and, separately, information on the debt of the units reporting to general government (public producers) which are not classified as general government. This set of units is called generically public corporations and their debt is not subject to (i.e. it is not included in the scope of) EDP and, consequently, it is not included in the Notifications to the European Commission which refer to the EDP.

The Banco de España statistics provide general government indebtedness both in absolute figures and in relative terms with respect to GDP. National GDP is used in respect of the total debt of the sector and its subsectors, and regional GDP is used to obtain the ratio corresponding to each regional (autonomous) government. In both cases the source of GDP is the INE's publications of Spanish National Accounts and Spanish Regional Accounts. However, since the regional GDP data are updated with a lag in respect of the national GDP data, for the years in which data on regional GDP were not available, the

according to Spanish National Accounts according to the structure of regional GDP for the last available year. Although, this procedure may generate distortions in regional aggregates since not all regional (autonomous) governments grow at the same rate, it is not considered that this limitation will significantly alter the ratios in respect of the GDP of each regional (autonomous) government.
