NOTES TO THE TABLES OF CHAPTER 1 GENERAL FEATURES OF THE DATABASES

TABLE 1.1

The table shows information for the last five years, the first year of the serie (1983) and one intermediate year (1990). There is availability of the whole serie 1983 to 2009.

(a) The gross value added at basic prices of the corporations reporting to the Central Balance Sheet Office, as computed in Chapter 3 here of, as a percentage of the GVA_{bp} estimated by the Central Balance Sheet Office for the non-financial corporations and households sector from the figures published in the Spanish National Accounts. Estimated figure by the Central Balance Sheet Office for 1983 and 1990. The Spanish National Accounts GVA data used to calculate coverages are base 2000.

(b) Until April 2011.

(c) Until April 2012.

TABLE 1.2

Source: In-house calculations based on the INE Central Directory of Companies (DIRCE): «DIRCE. Statistics Results. 2009».

The table shows the number of individual firms in Spain by geographical area and the level of reporting of the large Spanish corporations.

(a) Only including corporations with a legal status that comes within the scope of the Central Balance Sheet Office. Individuals, jointly-held property and associations are not included.

TABLE 1.3

(a) Regarding the size and ownership status definitions, see the «Methodological Note» of this publication.

TABLE 1.4

Source: Prepared in-house drawing on the Contabilidad Nacional de España. Base 2000. Instituto Nacional de Estadística (www.ine.es).

As a result of the entry into force of Commission Regulation (EC) No 1889/2002, the treatment of Financial Intermediation Services Indirectly Measured (FISIM) in the Spanish National Accounts (CNE) base 2000 has been modified. In the CNE base 1995, FISIM were recorded as the intermediate consumption of a nominal sector or industry (which did not produce either goods or services, so that its GVA was a negative amount equal to FISIM). However, in the CNE base 2000, following the entry into force of the above-mentioned regulation, FISIM are allocated to each of the sectors or industries that use these services and that record them as intermediate consumption and as final consumption. Recording the intermediate consumption of FISIM by non-financial corporations makes for a better measure of the contribution of the sector's GVA to GDP. Evidently, the GVA thus obtained is smaller than that obtained before the entry into force of the Regulation.

The columns «CBSO coverage» show the percentage covered by the Central Balance Sheet Office of Gross Value Added at basic prices, Average number of employees and Personnel costs, in relation to the amounts estimated by the National Accounts for each activity grouping. In any case, the comparative figures of this table are approximate, because there is no identical definition between the aggregates compared (see text of the publication).

(a) National accounts figures also include those for sole proprietors and those for non-profit institutions serving households because of a market activity that is, in any case, irrelevant to this information.

(b) Full time equivalent jobs.

- Phenomenon non-existent or change meaningless when expressed as a rate of growth.

TABLE 1.5

Source: Prepared in-house drawing on the Contabilidad Nacional de España. Base 1995. Instituto Nacional de Estadística, (www.ine.es). National Accounts figures of 2007 are provisional.

Percentage covered by the Central Balance Sheet Office with respect to the figure estimated by the National Accounts per branch of activity (including sole proprietors). There is no identical definition of the aggregates compared (National Accounts figures and the Central Balance Sheet Office). See «Methodological note». That explains some of the differences shown in this table.

TABLE 1.6

Source: Prepared in-house drawing on the Contabilidad Regional de España. Base 2000. Instituto Nacional de Estadística (www.ine.es). Regional Accounts figures of 2007 are provisional.

The columns «CBSO coverage» show, for Gross Value Added at basic prices, the Average number of employees and Personnel costs (including sole proprietors), the percentage covered by the CBSO in relation to the estimated totals of the Regional Accounts for each Comunidad Autónoma (region). The aim is to evidence the limits of the use of the CBSO for regional studies. Each company is classified according to the region of the registered office. Regional Accounts takes into account the regions where the corporation has produced the output or paid the factors. On the contrary, column b.2 «CBSO coverage, according to work centre», is a good Personnel costs indicator of the regional coverage of the CBSO, without any bias of the kind described (see text of this publication).

(a) Unlike the variable average number of employees of the table 1.4 (full-time equivalent jobs), in this table the comparison with the Regional Accounts is made in terms of jobs.

TABLE 1.9

(a) It includes, to this end, the direct share of the General Government and the state-owned *holding* company SEPI (and those previous ones), in the corporations contributing to the CBSO.

(b) In the offprint Methodological supplement, the scope of this concept is explained.
