SOURCES: Sistema de Tarjetas y Medios de Pago S.A. (STMP)

a. Value weighted average fee in domestic transactions. The breakdown per economic sectors is the result of the aggregation of up to 100 different business categories.

b. At the time of publication of Q2 2006 data, two new economic areas have been included ("low value categories" and "charity and solidarity").

c. The item "low value categories" includes those business categories (except toll-highways) in which the average purchase value using payment cards does not exceed 15 euros and whose prices, in general, are conditioned by a particular regulatory framework, (e.g. Public transport, parking, telephone booths etc.)

d. For the calculation of the minimum merchant discount fee in 2018, the value recorded in the "charity and solidarity" sector were exceptionally excluded, due to their atypical low value which might distort the aggregated value of the full range of sectors
